

# Gravitational degrees of freedom and isometric embedding

Steven Willison

CENTRA, IST, UTL, Av. Rovisco Pais 1, 1049-001 Lisboa, Portugal

## **Abstract**

When physical space-time is treated as a submanifold embedded in a hypothetical 14 dimensional Minkowski space-time, the Einstein Equations can be reformulated as a system of nonlinear wave equations in the embedding coordinate functions. We will focus on possible applications in gravitational physics and give a discussion of the initial value/constraints problem .
